

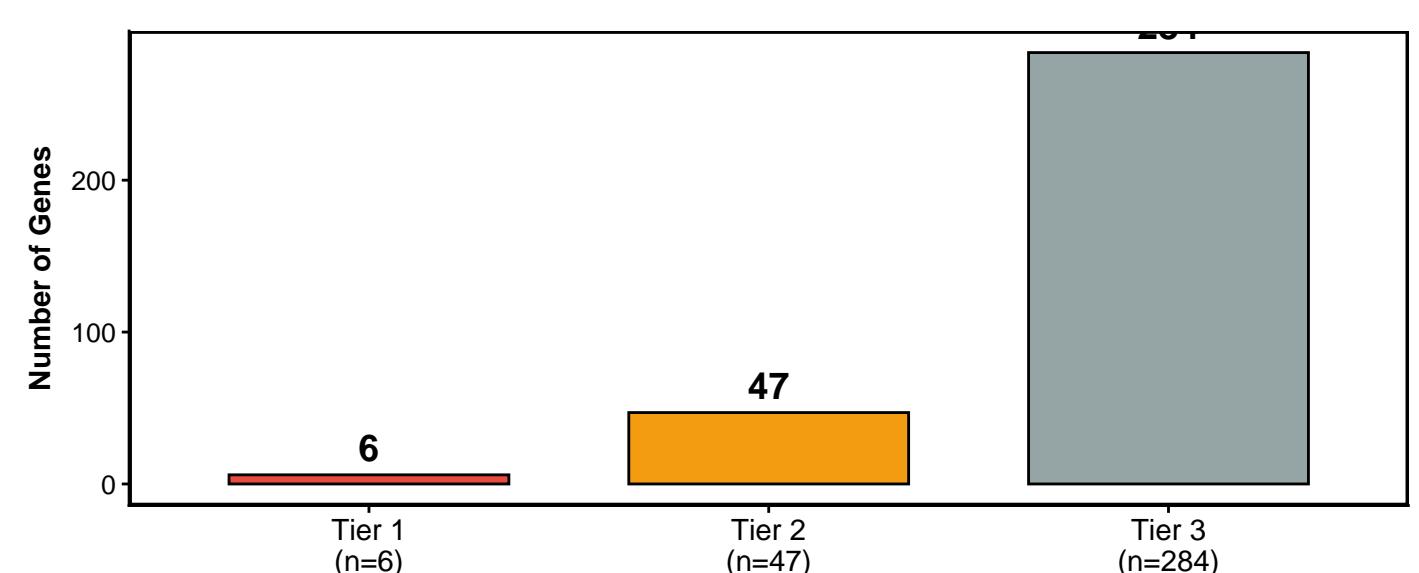

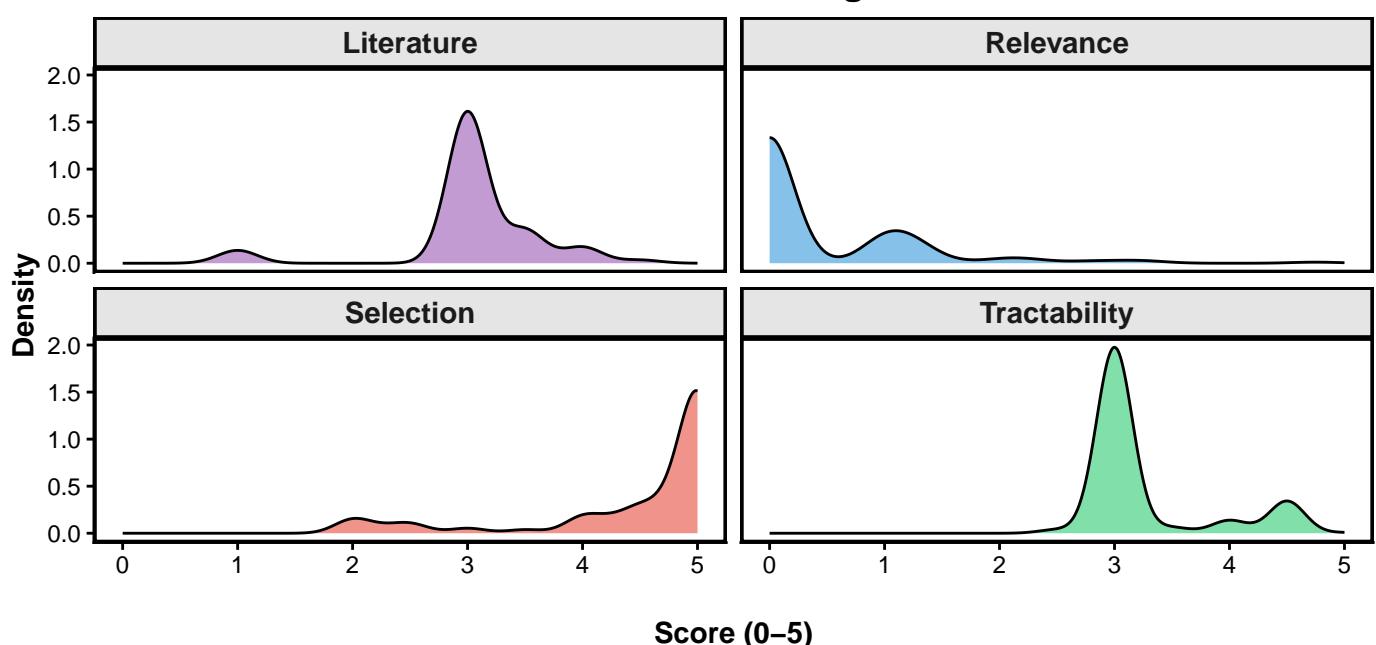

### Figure 4: Multi-Criteria Gene Prioritization for Experimental Validation

Systematic ranking of 337 genes using selection strength, biological relevance, experimental tractability, and literature support

#### Gene Prioritization Tier Distribution

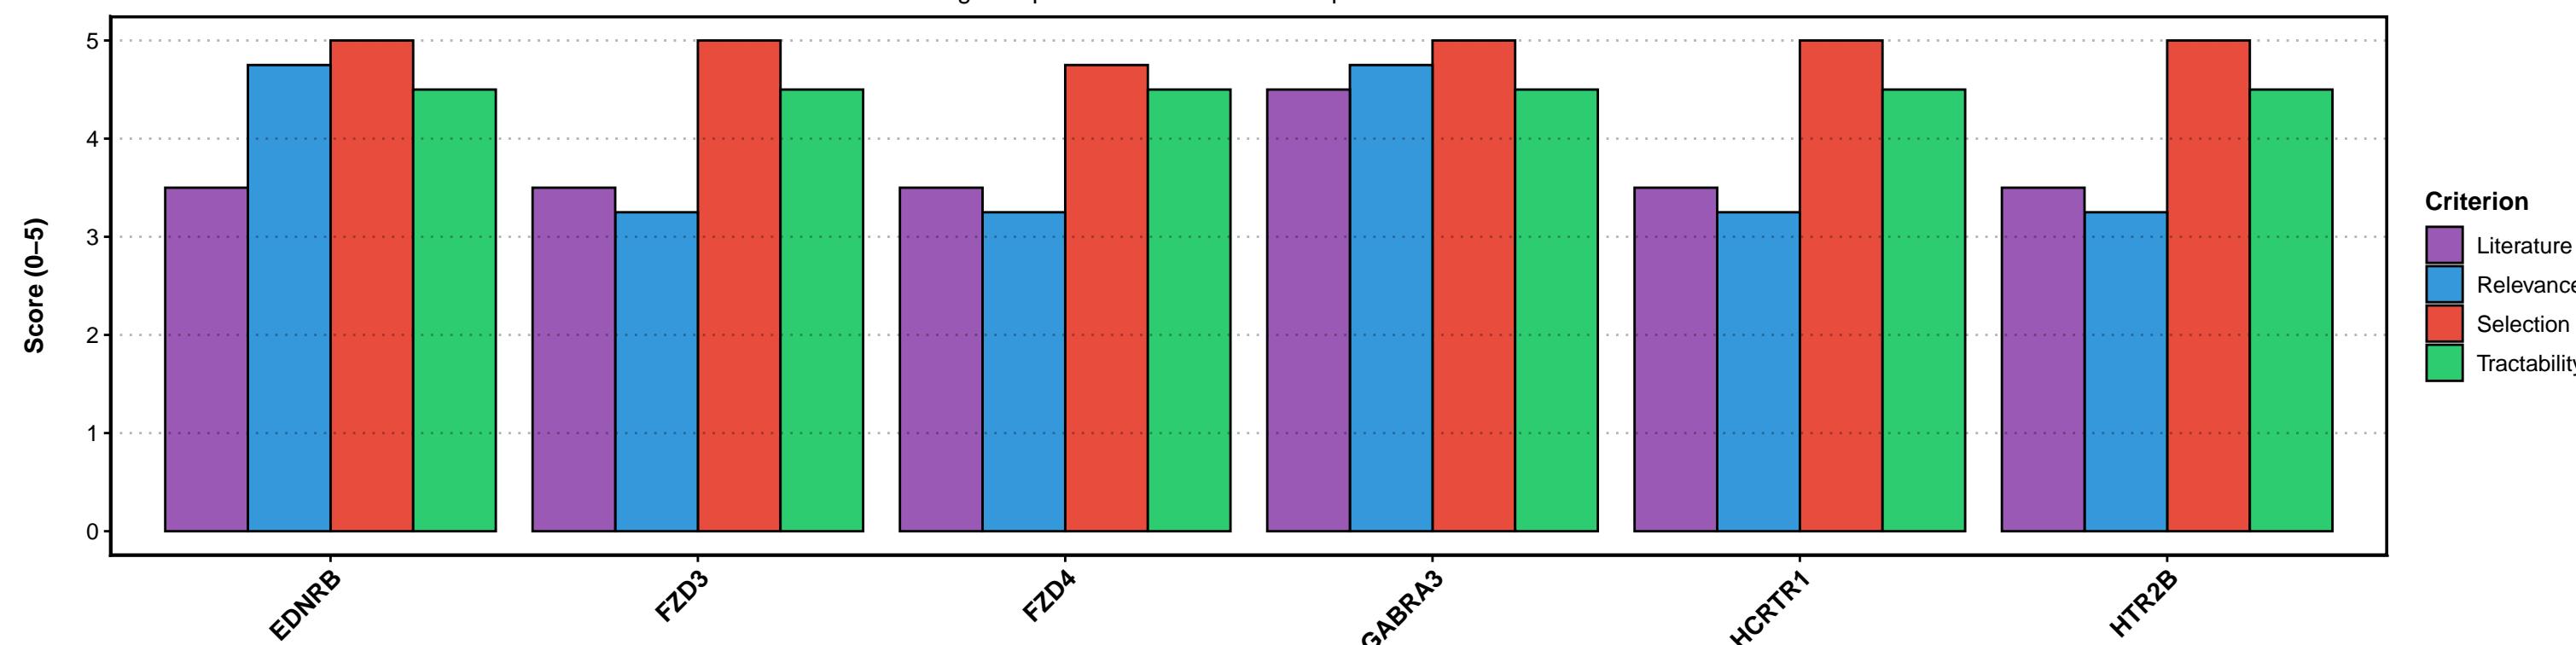

#### Distribution of Scoring Criteria

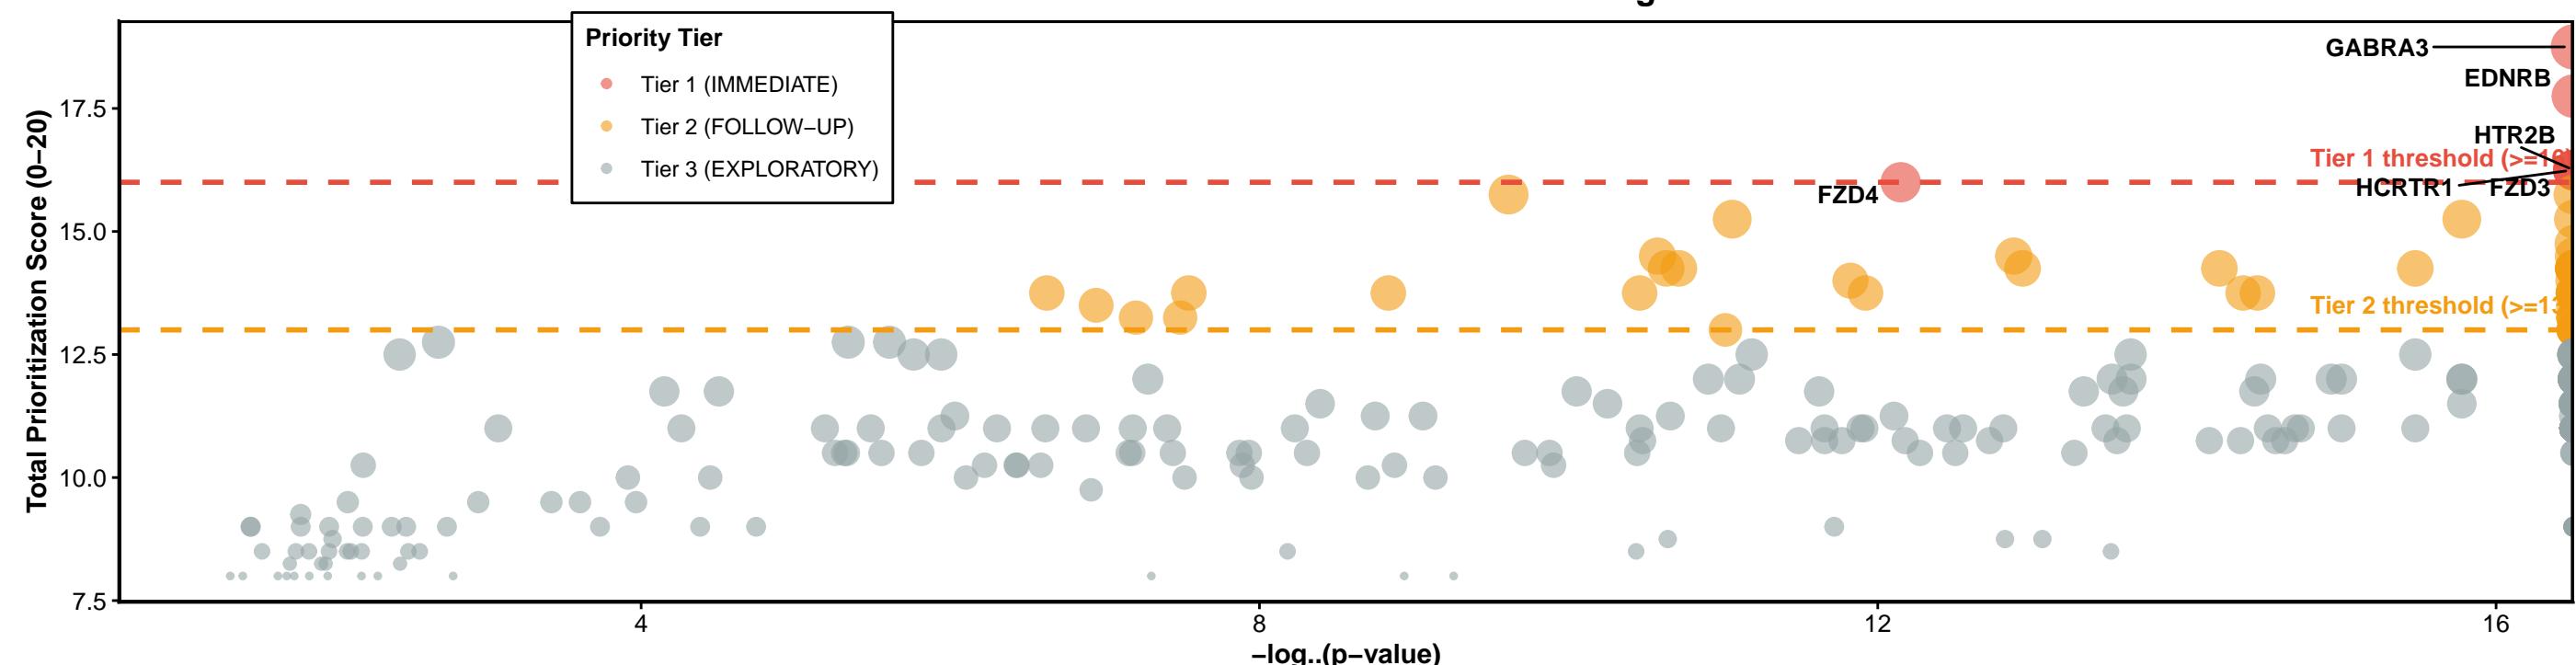

#### Tier 1 Genes: Detailed Scoring

6 genes prioritized for immediate experimental validation

#### Prioritization Score vs. Selection Strength

(A) Distribution of genes across three priority tiers. Tier 1 (n=6): IMMEDIATE validation. Tier 2 (n=47): FOLLOW-UP. Tier 3 (n=284): EXPLORATORY.

(B) Distributions of four scoring criteria across all 337 genes. Each criterion scored 0–5.

(C) Detailed scores for 6 Tier 1 genes: GABRA3 (18.8), EDNRB (17.8), HTR2B (16.2), HCRTR1 (16.2), FZD3 (16.2), FZD4 (16.0).

(D) Total prioritization score vs. selection strength. Tier 1 genes labeled in red.

Note: Heatmap of top 30 genes saved separately (Figure4\_GenePrioritization\_Heatmap.pdf)
