

# Metal Classification: Fire-Enriched vs Geogenic

CORRECTED: As is geogenic background, not fire contamination

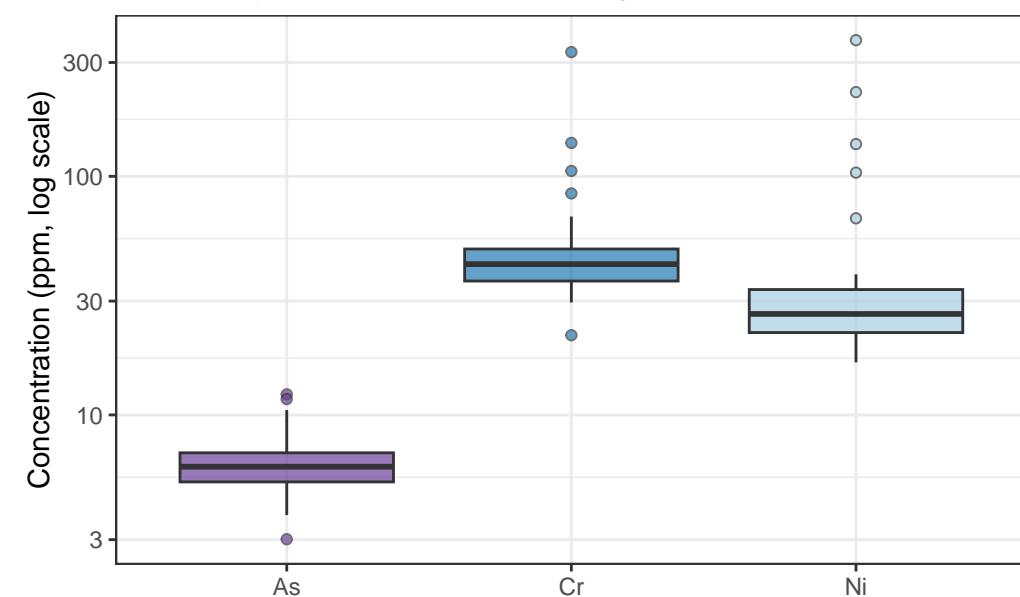

## A) Fire-Enriched Metals

High variability (CV >200%), spatial clustering

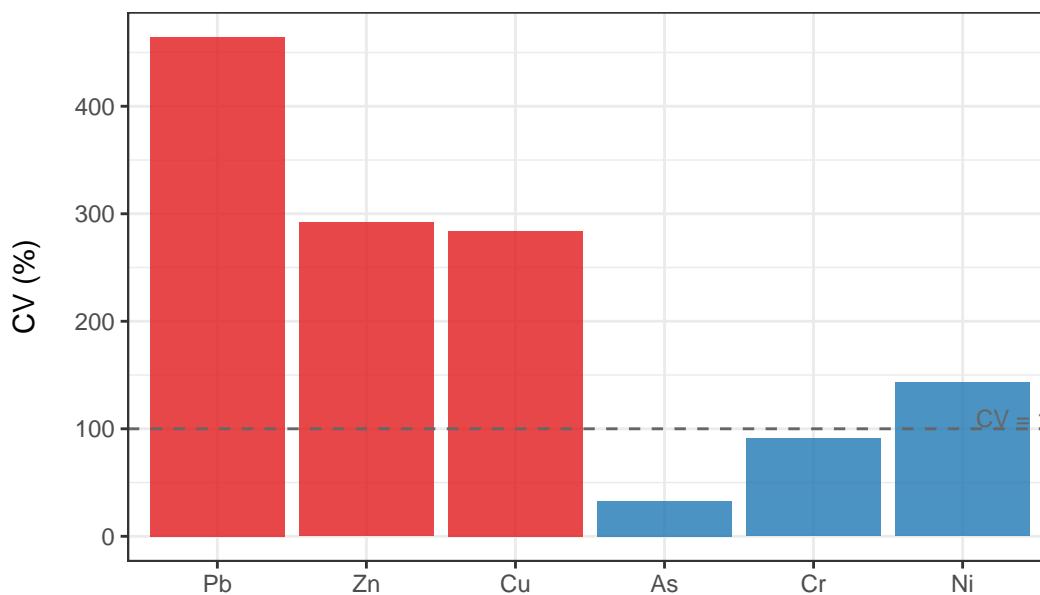

## B) Geogenic Metals

Low variability (CV <100%), no spatial clustering

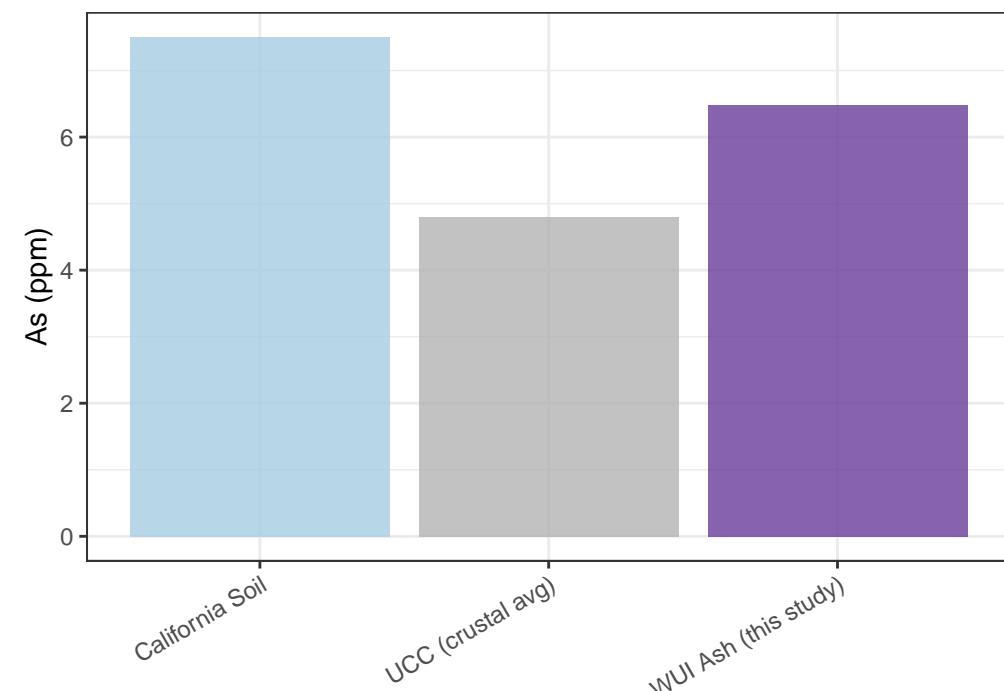

## C) Coefficient of Variation

CV >100% indicates heterogeneous contamination

## D) Arsenic in Context

Concentrations consistent with geogenic background

Classification    Fire-enriched    Geogenic
